MEMORANDUM

East German Budget

1. The East German state budget consists of the budget of the republic, the budgets of regional authorities, and the centrally planned financial resources of state-owned enterprises (VEBs). Because it contains valuable information on important and sensitive aspects of economic activity and state policy, detailed information on its contents is closely held. The Ministry of Finance insures that versions circulated within the government are carefully edited, and only selected figures are released for publication. Moreover, the unattributed portion of expenditures swelled from 34% to 46% of the budget during 1973-1975, probably a reflection of massive government subsidies to insulate the domestic price level from Western inflation.

2. The budget supports industrial and agricultural enterprises with subsidies and other payments, but most investment funds are now channelled through the banking system. The budget also makes substantial direct payments to individuals, mostly as pensions and social security benefits. It is the sole source of financing for national defense, civil administration, and public services.

3. Turnover taxes, paid by producers but levied mostly on consumer goods, provide a large share of budget revenues. Profit taxes on socialized enterprises are also an important source of revenue, as are various taxes on private concerns. Additional revenues are derived from direct wage and income taxes, land-use taxes and payments into the social security fund by employees, employers, cooperative members, and the self-employed.
